2022 DBP (HAA5) Levels Update

The State Water Resources Control Board maximum contaminate level (MCL) is 60 parts per billion (ppb) for haloacetic acids (HAA5). In the second quarter, our results were reduced to 58.5 ppb and currently we are at 54.8 ppb. We will continue to monitor and maintain our HAA5's to ensure the water you are receiving is under the States MCL.
